

ROAD SAFETY: A STRATEGIC PRIORITY FOR THE WORLD ROAD ASSOCIATION

- Road operators and managers have a key role to play in ensuring road safety for their users and workers.
- Road infrastructure does play a role, together with vehicles and drivers, in providing a safe transport system.
- The World Road Association (PIARC) produces class-leading international reports that provide best practice, tools, case studies, check lists...
- PIARC reports are available for free and can be used by countries at all stages of development.
- Solutions and methodologies should be implemented in all cases.
- Training courses should be organised for road planners, road designers, road managers and accident investigators.
