**Wildlife warning signs seldom have any effect  
on driving behaviour, but it happens.**

**Moose on the road, Norway**

# Wildlife fence, height: 230 cm

# Fragmentation due to transport infrastructure

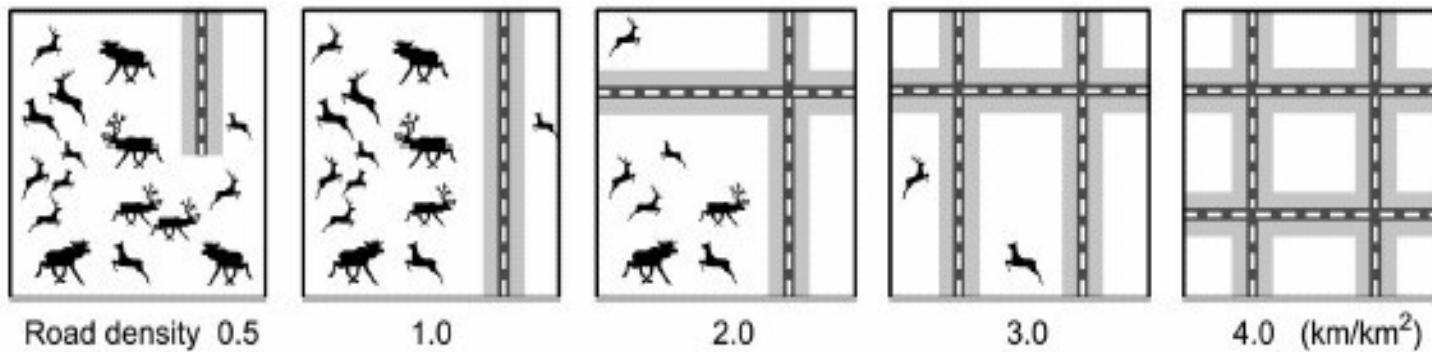

A36 Alsace, France

# Habitat fragmentation

**Splitting of natural habitats and ecosystems into smaller and more isolated patches.**

**Habitat fragmentation due to transportation infrastructure can lead to local extinction of species when the patches become smaller than the minimum habitat size.**

# The Approach of the Handbook

**Avoidance**

**Minimisation**

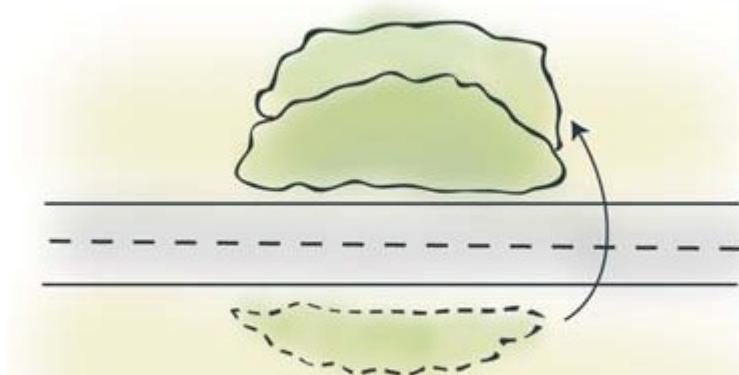

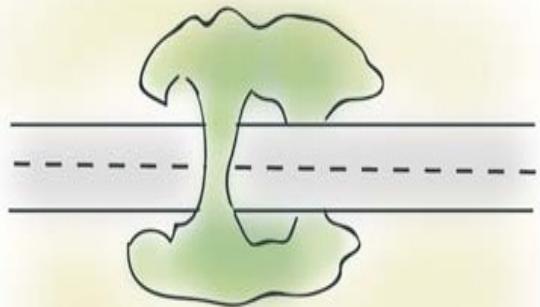

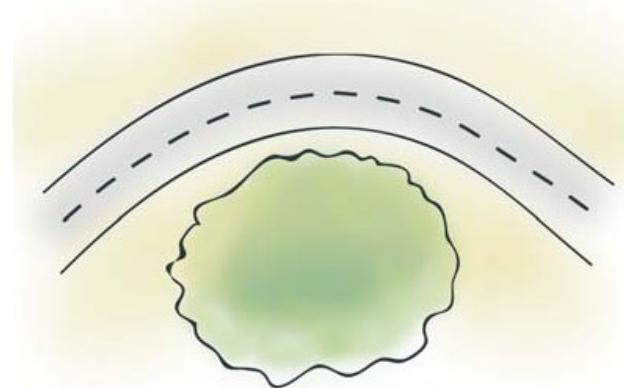

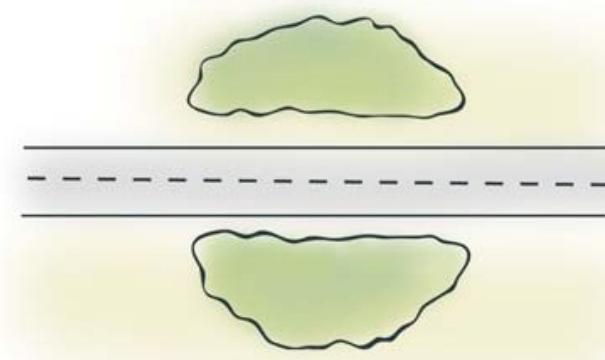

**Mitigation**

**Compensation**

# Avoid – Mitigate - Compensate

# Fauna overpass

**Woeste Hoeve,  
The  
Netherlands**

# Fauna overpass

Boerskotten, the Netherlands

# Wolverine Pass, Banff National Park

# Fauna overpass

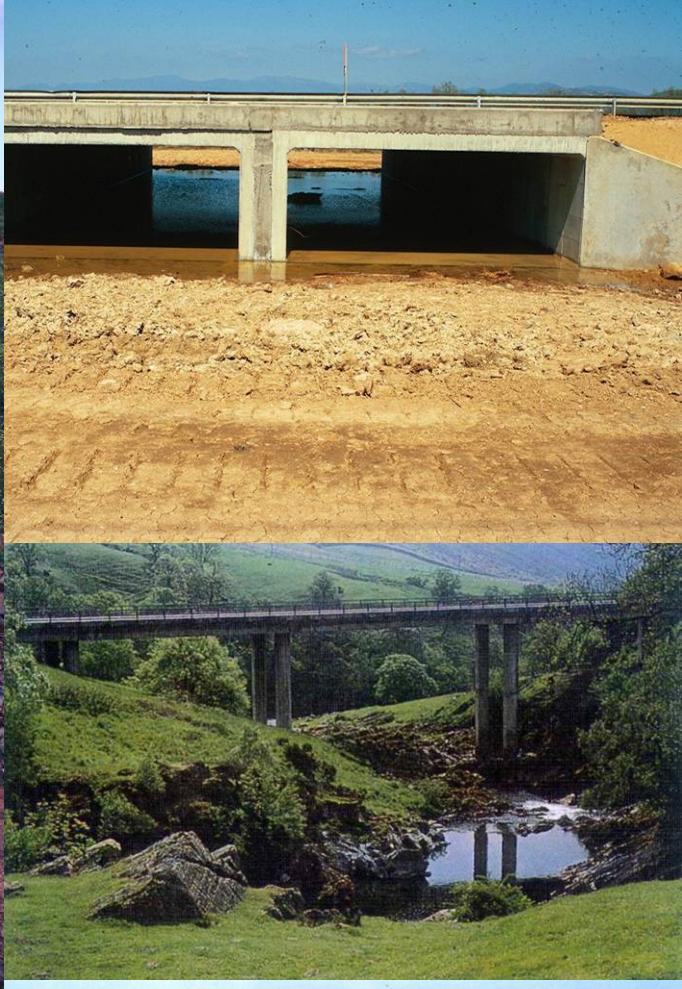

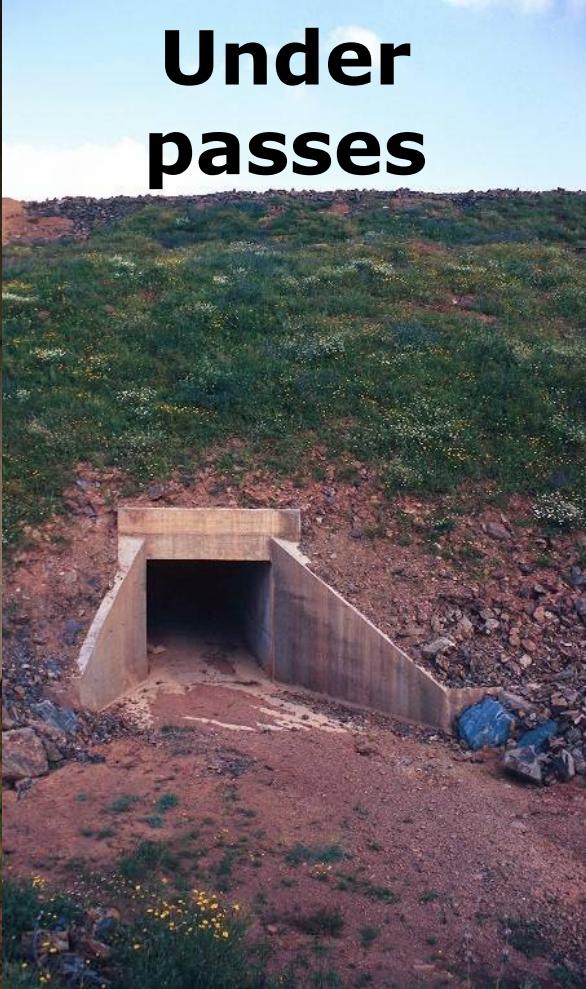

# Tunnel under nature area

# Bridge instead of embankment

# Under passes

# Pipes and culverts must be ecologically designed

**"Let the river flow, and the riparian areas live."**

**Hw 23/E6, Norway**

# The permeability concept

- **The primary objective is to maintain the permeability of the transportation infrastructure for wildlife, to ensure the connectivity of the habitats at a larger scale.**
- **Both new and existing infrastructure is considered.**
- **Considers not only the transportation infrastructure.**

# Ecological compensation

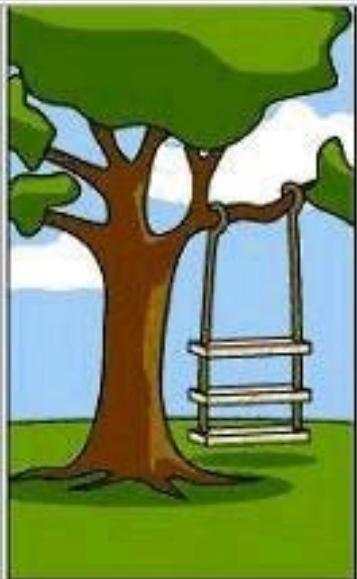

- **Creating, restoring or enhancing nature qualities in order to counterbalance ecological damage.**
- **Measures should balance the ecological damage, aiming for a 'no-net-loss' situation that benefits both habitats and their associated species.**

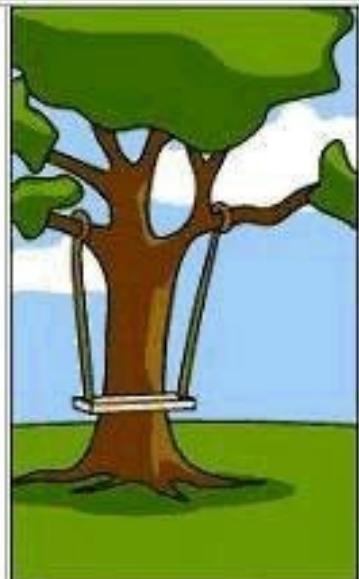

# Monitoring/Evaluation

- To detect failures in the installation, construction or maintenance of measures.
- To establish if the mitigation measures fulfil their purpose.
- To evaluate if the measures provide long term mitigation for the species and the habitats.

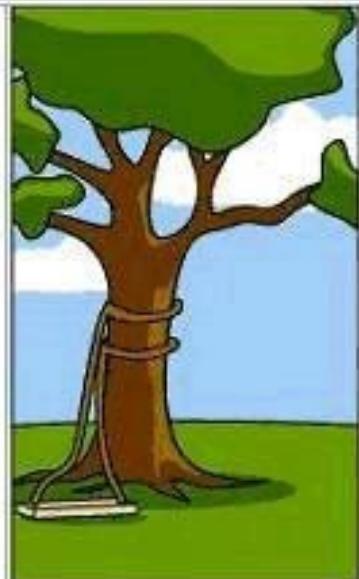

How the customer explained it

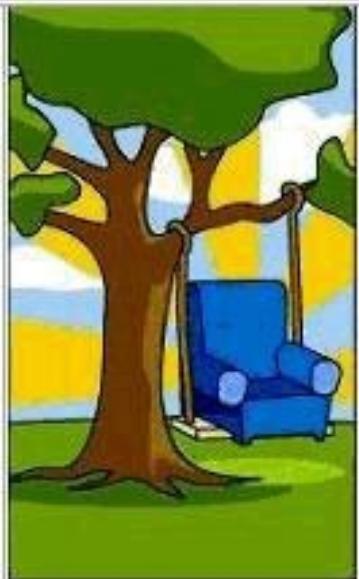

How the project leader understood it

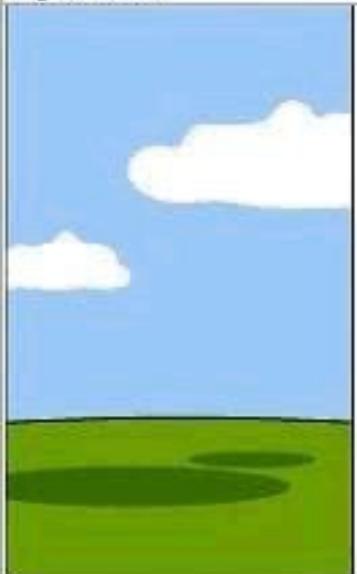

How the analyst designed it

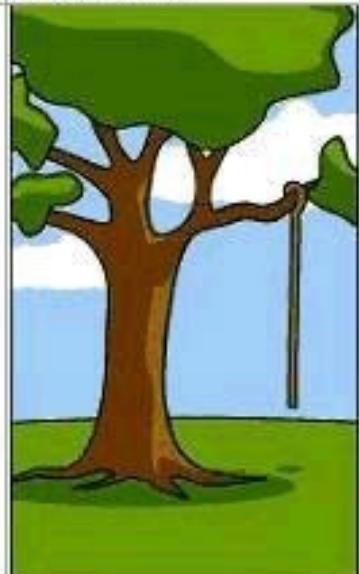

How the programmer wrote it

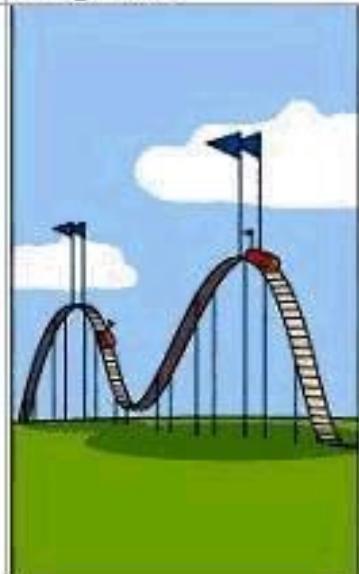

How the sales executive described it

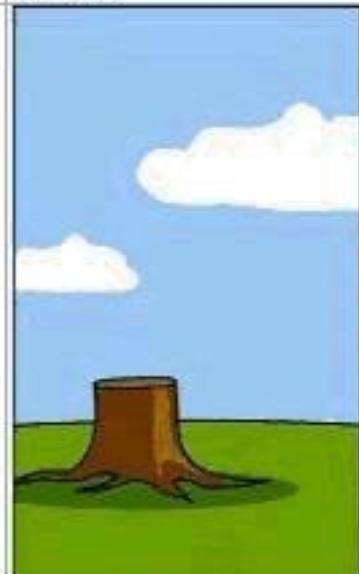

How the project was documented

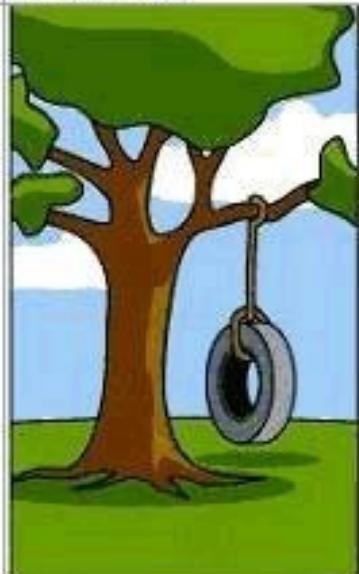

What operations installed

How the customer was billed

How the helpdesk supported it

What the customer really needed

# Objectives for monitoring

- **avoid repeating mistakes**
- **provide new information for improving the design of mitigation measures**
- **identify the measures with an optimum relation between cost and benefit**
- **save money for future projects**

# Monitoring methods

# COST 341

Fragmentación del hábitat causada  
por las infraestructuras de transporte

los responsables de los proyectos directrices para reducir al mínimo las barreras que ejercen las infraestructuras lineales de transporte y sus efectos de fragmentación del paisaje, introduciendo medidas correctoras como los pasos de fauna, aplicando medidas compensatorias y controlando y evaluando la efectividad de las medidas aplicadas.

**Thank you! Gracias!**
