RAPPORT DÉTAILLÉ SUR DES POINTS CULMINANTS

DETAILED REPORT ON HIGHLIGHTS

Technical Conference, on prefissuring of cement-treated layers

Madrid, September 29, 2009

Held in the Assembly Hall of the Center of Studies of Applied, CEDEX

Developed initially in countries like France and Germany, pre - fissuring started in Spain in the 80s of last century. However, it has been since 2002 when it has experienced a very important impulse in our country as, according to the standard Norm 6.1-IC, it has become mandatory for higher traffic categories.

In these seven years many roads have been pre-fissured depending on several Road Administrations, sometimes using originally methods developed in other countries and sometimes using some methods developed directly by the contractors. Therefore it was considered appropriate to organize this Conference , on one hand as to explain the objectives, regulations and available methods, and on the other hand as an exposition of practical experiences.

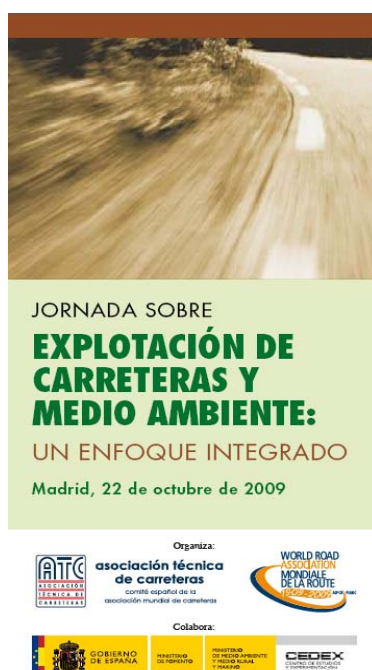

A round table was dedicated to discuss the economic and technical aspects of the road pavements.

The Road Pavement Committee and the Spanish Institute of Cement and its Applications (IECA), organizers of this Conference, are confident that it will be useful for all those interested in the road pavement layers treated with cement, which are currently the most widely used on the Spanish roads.

Conference on Road Management and Environment

Madrid, October 22, 2009

Held in the Assembly Hall of the Studies Center for Applied Technologies, CEDEX

The purpose of this meeting was to implement a methodology for collecting and processing information to normalize action patterns in case of conflict between road and environmental values in a similar way as in other fields of road management, such as traffic or maintenance.

Technical Conference on Slurry and cold microsurfacing system,

Madrid, October 29, 2009

Held in the Assembly Hall of the Studies Center for Applied Technologies, CEDEX

An overview of this technique in Spain has been analyzed, as well as the materials used, the prospects and means of production and future prospects, and also the new Article 540 of the current PG-3, which should be updated following the new rules laid down in European Standard BS EN 12,273 and 12,274 and the benefits in respect of *such treatment*, especially for improving the surface characteristics (texture and slip resistance) of pavements. This Conference has been a platform for responsible of Road Administrations, for Consultants and Material Testing Laboratories. It was also addressed to all Spanish construction companies and manufacturers, as all of them should know in detail this technique of excellent features and very good value for money.

The V Symposium of Tunnels under the heading "Security for the tunnels of the XXI century"

will take place on 24, 25 and 26 February 2010 in the Euskalduna Palace in Bilbao.

With the Royal Decree 635/2006 of 26 May about a minimum of safety requirements in road tunnels, it becomes mandatory for all tunnels in project, under construction and in service, to comply with the new rules that represent a new culture in the engineering of tunnels. Therefore periodic drills are required.

Thus we need to open a debate with the Head of Security, Director of Operation and Inspection Agencies as to clarify ideas for all new concepts that have been put on the table.

Lastly, we shall also need to establish a discussion forum in relation to risk analysis provided in the decree and its methodology. This risk analysis should take into account all factors that affect the tunnel security.

To address these issues, the Spanish National Committee organizes the V Symposium

Technical workshop on median barriers and margins

Madrid, April 29, 2010

JORNADA TÉCNICA SOBRE

MEDIANAS Y MÁRGENES

Madrid 29 de abril de 2010

Comité Técnico de Carreteras Interurbanas y Transporte Integrado Interurbano

Organiza:
