International Seminar: 19-20 April 2023

Technical Visit : 21 April 2023

Venue: Dehradun, India

Language: The official language of the International Seminar will be English.

Call for papers: Open until 30th November 2022.

Registration and information: coming soon.

Background:

Tunnels are very practical alternatives to cross physical obstructions or traverse through physical barriers such as mountains or snow bound areas and also in urban scenario to overcome the problem of RoW availability, congestion, pollution, etc. Road tunnel helps to reduce the distance between two locations, promote tourism & development of that particular area and also a boon against the fight with global warming. Many developed countries have adopted tunnelling as the most feasible option for quite some time. Currently, India is one of the fastest growing markets for tunnels and for Expressways, National Highways and high-density corridors passing through mountain ranges the option of tunnel is generally more viable taking into account overall benefit as compared with conventional hill road. so, there is need to organise international Seminar on 'Advances in Design, Construction and Operation of Tunnels' for benefit of Highways Professionals, government officers, designers, consultants, researchers, academicians, students & research scholars, material & machinery manufacturers, device Manufactures, etc across the globe.
